

■ MLB Model — Laporan Hasil & Analisis ROI

Periode Evaluasi: 2026-08-26 s/d 2026-09-23 | Total Settled: 167 picks | Laporan: 2026-09-24 15:28 WIB | Unit Stake: 1.00u Flat

1 · Ringkasan Eksekutif & Key Metrics

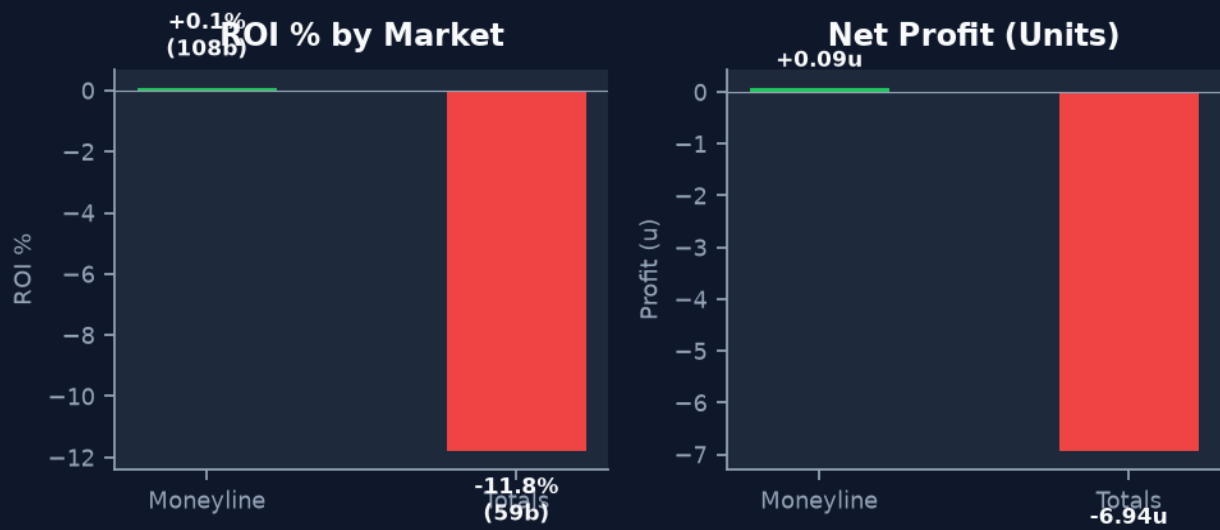

Metrik Portofolio	Nilai	Keterangan Evaluasi
Total Forecast Dihasilkan	172	Locked picks dari automated slate engine
Settled Picks (Selesai)	167	Official MLB game results terverifikasi
Pending / Active Slate	5	Pertandingan belum tuntas / menunggu settlement
Rekor W / L / P	90W – 77L – 0P	Hit Rate: 53.9%
Total Net Profit	-6.84u	Flat 1-unit staking basis
Return on Investment (ROI)	-4.1%	Tertekan oleh under-performance market Totals
Model Utama yang Berjalan	ML_COMBO_V2 & OU_UNIFIED	2 arsitektur model kuantitatif aktif

■ **Executive Insight:** Portofolio MLB mencatat **53.9% win rate** dari 167 settled bets. Namun, ROI berada di **-4.1% (-6.84u)** akibat penurunan tajam pada market Totals (khususnya tier **UNDER_RISKY**). Sebaliknya, arsitektur Moneyline (**ML_COMBO_V2**) berada di zona profit neto positif dengan win rate solid 58.3%.

2 · Analisis Hasil & ROI Berdasarkan Market

Market	Model Engine	Bets	W	L	Win %	Avg Odds	Profit	ROI
MONEYLINE	ML_COMBO_V2	108	63	45	58.3%	1.734	+0.09u	+0.1%
TOTALS	OU_UNIFIED	59	27	32	45.8%	1.952	-6.94u	-11.8%

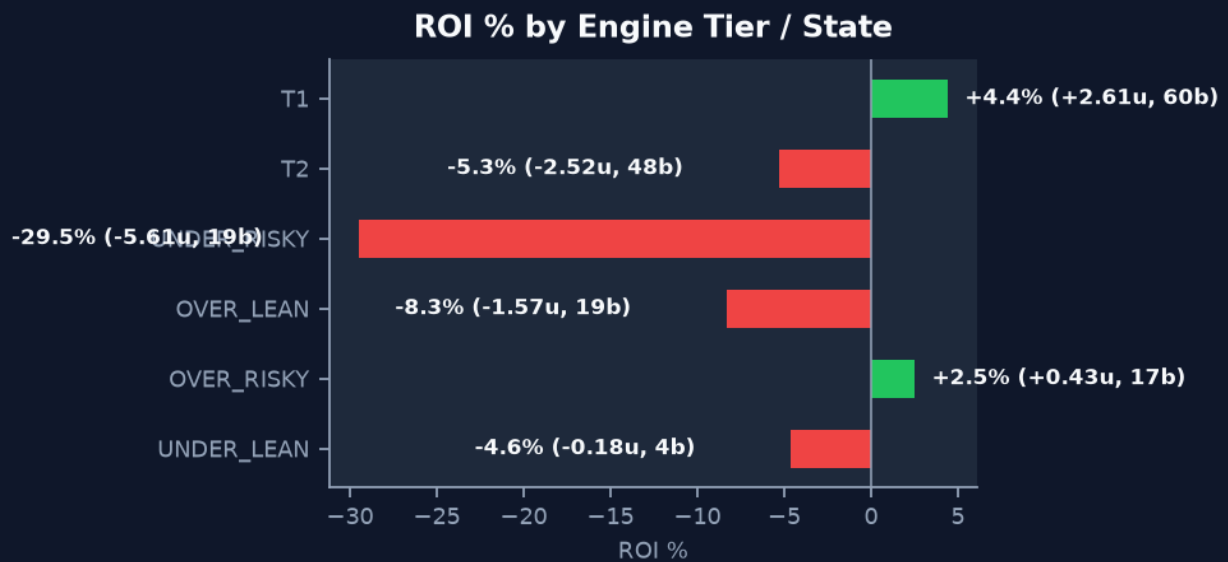

■ **Market Insight:** 1) **Moneyline (ML_COMBO_V2)** membukukan **63W–45L (58.3%)** dengan profit **+0.09u (+0.1% ROI)**. Edge model ML terbukti valid di pasar sesungguhnya.

2) **Totals (OU_UNIFIED)** adalah titik pelemahan utama: **27W–32L (45.8%)** dengan rugi **-6.94u (-11.8% ROI)**. Model run projection mengalami miscalibrasi dalam memprediksi high-scoring games.

3 · Analisis Hasil & ROI Berdasarkan Tier (Engine State)

Tier / State	Market	Bets	W	L	Win %	Profit	ROI	Karakteristik
T1	MONEYLINE	60	39	21	65.0%	+2.61u	+4.4%	High-conviction edge, favorable SP & offense
T2	MONEYLINE	48	24	24	50.0%	-2.52u	-5.3%	Secondary lean, border threshold
UNDER_RISKY	TOTALS	19	7	12	36.8%	-5.61u	-29.5%	Model total < market line, risky gap
OVER_LEAN	TOTALS	19	9	10	47.4%	-1.57u	-8.3%	Model total > market line, moderate gap
OVER_RISKY	TOTALS	17	9	8	52.9%	+0.43u	+2.5%	Model total > market line, volatile SP
UNDER_LEAN	TOTALS	4	2	2	50.0%	-0.18u	-4.6%	Model total < market line, small lean

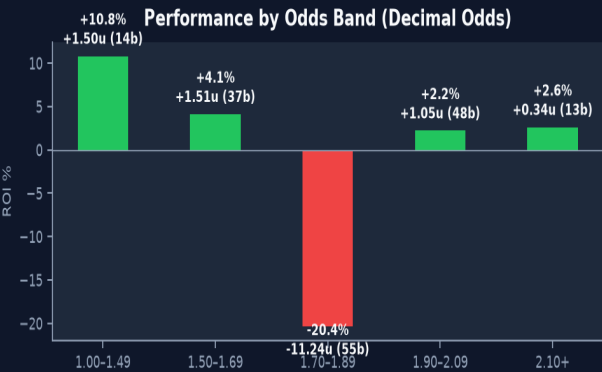

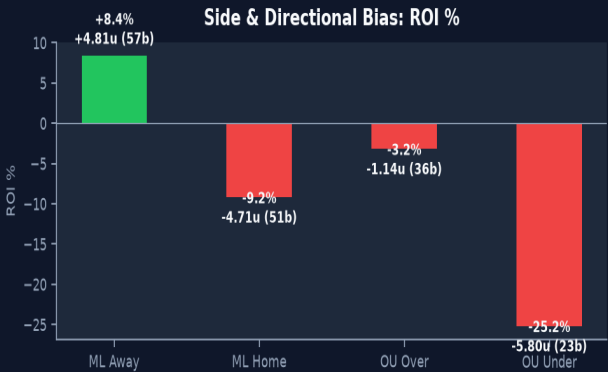

■ **Tier Breakdown Insight:**

- **T1 (Moneyline Top Tier)** adalah tier terbaik: **65.0% Win Rate (39W–21L)**, menghasilkan **+2.61u profit (+4.4% ROI)**. Fundamental sinyal T1 sangat kuat.
- **T2 (Moneyline Second Tier)** mengalami coin-flip: **50.0% Win Rate (24W–24L)**, merugi **-2.52u (-5.3% ROI)** karena odds tidak cukup menutupi juice.
- **UNDER_RISKY** adalah bencana sistematis: **36.8% Win Rate (7W–12L)**, rugi **-5.61u (-29.5% ROI)**. Tier ini menyumbang **82% total kerugian portofolio!**

4 · Analisis Bias Sisi (Home/Away, Over/Under) & Odds Band

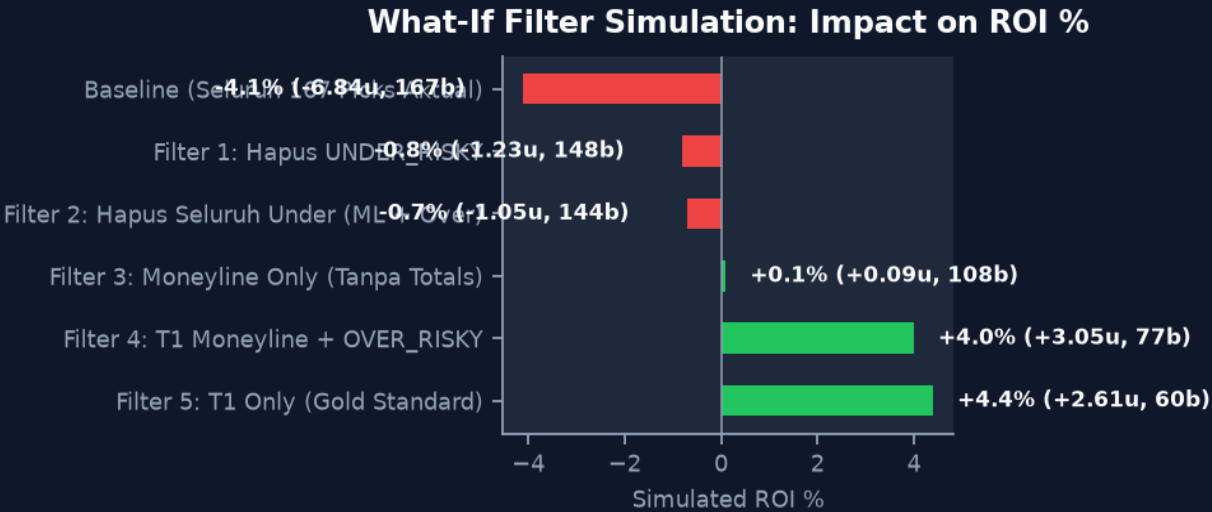

Market & Sisi	Total Bets	W	L	Win %	Profit	ROI	Diagnosa
ML Away (Underdog / Road Fav)	57	35	22	61.4%	+4.81u	+8.4%	Model menangkap road-value luar biasa
ML Home (Home Field Edge)	51	28	23	54.9%	-4.71u	-9.2%	Market overprice tim tuan rumah (low juice)
Totals Over (High Runs)	36	18	18	50.0%	-1.14u	-3.2%	Cenderung seimbang, mendekati break-even
Totals Under (Low Runs)	23	9	14	39.1%	-5.80u	-25.2%	Bullpen blowup & garbage-time runs merusak Under

- **Deep Diagnostic:**
- **Away Dominance (+8.4% ROI):** Tim tamu menghasilkan profit bersih +4.81u dengan hit-rate 61.4%. Model sangat akurat mengeksploitasi public bias yang over-bet tim tuan rumah.
 - **Zona Bahaya Odds 1.70–1.89 (-20.4% ROI):** Di band odds ini terjadi kerugian -11.24u (24W-31L, 43.6% WR). Kebanyakan pick Under dan T2 Home berkumpul di zona ini tanpa margin of safety yang memadai.

5 · Simulasi What-If: Dampak Filtering terhadap ROI

Skenario Filter Seleksi	Bets	W	L	Win %	Profit (u)	ROI %	Delta vs Baseline
Baseline (Seluruh 167 Picks Aktual)	167	90	77	53.9%	-6.84u	-4.1%	0.00u
Filter 1: Hapus UNDER_RISKY	148	83	65	56.1%	-1.23u	-0.8%	+5.61u
Filter 2: Hapus Seluruh Under (ML + Over)	144	81	63	56.2%	-1.05u	-0.7%	+5.80u
Filter 3: Moneyline Only (Tanpa Totals)	108	63	45	58.3%	+0.09u	+0.1%	+6.94u
Filter 4: T1 Moneyline + OVER_RISKY	77	48	29	62.3%	+3.05u	+4.0%	+9.89u
Filter 5: T1 Only (Gold Standard)	60	39	21	65.0%	+2.61u	+4.4%	+9.46u

6 · Rekomendasi Konkret untuk Peningkatan Model & ROI

1. Depresiasi / Hard-Gate pada State UNDER_RISKY (Prioritas Tertinggi)

UNDER_RISKY menghasilkan kerugian -5.61u (-29.5% ROI) dengan win rate anjlok ke 36.8%. Model OU_UNIFIED saat ini gagal memperhitungkan volatilitas bullpen di inning akhir (inning 7–9) dan faktor run-inflation di era pitch-clock. **Tindakan:** Tambahkan hard-gate otomatis untuk mengunci finalState menjadi NO_BET apabila total line di bawah 8.5 atau jika bullpen ERA salah satu tim berada di kuartil terbawah (> 4.25).

2. Perketat Threshold Seleksi Moneyline T2

Tier T2 mencatat 50.0% win rate (24W–24L) dengan net profit -2.52u (-5.3% ROI). Pada odds rata-rata 1.85, win rate 50% menghasilkan negative EV. **Tindakan:** Naikkan syarat Combo Score T2 dari batas minimum sekarang (contoh 65) menjadi minimal 68, serta wajibkan adanya minimal 2 game log good start berturut-turut pada starter pitcher yang dipilih.

3. Kapitalisasi Edge T1 Moneyline (Skalakan Alokasi Unit)

Tier T1 mencatat **65.0% Win Rate (39W–21L)** dan **+4.4% ROI (+2.61u)**. Ini adalah aset algoritma paling menguntungkan di seluruh sistem MLB. **Tindakan:** Pertimbangkan fractional Kelly staking atau alokasi 1.25u–1.50u untuk T1, sembari mempertahankan alokasi flat 0.75u untuk tier sekunder.

4. Perbaiki Penilaian Home Field Advantage (HFA) pada Moneyline

Away ML menghasilkan **+8.4% ROI (+4.81u, 61.4% WR)** sedangkan Home ML merugi **-9.2% ROI (-4.71u)**. Pasar taruhan (bookmaker) secara konsisten membebankan premium berlebih pada tim tuan rumah. **Tindakan:** Kurangi bobot Home Field Advantage dalam formula fair decimal ML_COMBO_V2 sebesar 3%–5% untuk menghindari taruhan tim kandang dengan harga mahal/minus-value.

5. Evaluasi Ulang Korelasi Cuaca & Park Factor pada Model Totals

Model Totals saat ini memproyeksikan Under terlalu agresif di venue berdimensi kecil atau saat temperatur tinggi. **Tindakan:** Masukkan dynamic weather adjustment (wind direction & velocity, temperature) ke dalam InputSnapshot sebelum OU_UNIFIED menghitung projected total.

7 · Sampel Ledger Settled Picks (Ringkasan Representatif)

Menampilkan 25 sampel pick dari 167 total settled data yang mencakup seluruh tier dan market.
